DACE

JUST WHEN YOU THOUGHT ALL GATE MOTORS WERE THE SAME

WE ADVANCED OURS LIKE NO OTHER

EXIT ENTRY CLOSE SOLO TO BE

POWER EXIT

NEXT

DACE, being the innovators they are, have come up with a World First in gate motors, the

DIGITAL BUSINESS CARD

Gone are the days when you gave your client your business card and knew that they would either lose it or throw it away. When they decided to call you to install the intercom they couldn't afford earlier, or get repairs they desperately needed or even perhaps pass your details on to a friend as a referral they couldn't remember your company name and moved on to the yellow pages or the internet and gave the work to someone else.

That was then! Now you simply get your details loaded onto your Digital Business Card by your supplier. Having completed an installation of a SOLO or CONDO motor, plug your Digital Business Card into the motor PCB and VOILÄ in 5 seconds your details are stored safely on the gate motor being visible via the LCD screen, always promoting your company and ensuring repeat business.

Your supplier will download your contact details onto your Digital Business Card via their computer using DACE software

DON'T THROW YOUR DIGITAL BUSINESS CARD AWAY NOW!

Each time you install a SOLO or CONDO motor just load your details onto the PCB and let it keep working for you. Never fear, should your details change, merely take your Digital Business Card to your supplier and get your new details loaded over the old ones. A smart and affordable alternative to your old printed business cards.

ACCESS CONTROL D.A.C.E PRODUCTS

These great motors provide an externally visible LCD, which is also a feature unique to the DACE SOLO and CONDO motors. During motor installation the LCD will guide you through an already extremely simple one touch programming procedure and run checks to ensure a professional installation.

WHAT WILL THIS MOTOR DO FOR YOU?

Installation complete, the LCD now works for you. Constantly flashing your contact details, the LCD advises the homeowner of any problems it may experience so that when they call you for assistance you can get a more accurate idea of the problem and you are able to go better equipped to return the site to normal as soon as possible. The idea is to reduce time spent on site and on the phone to the service department analysing the problem. Fault conditions are highlighted by the LCD backlight flashing to alert the homeowner. We have left the best until last! After 7000 operations (± 2 years at 40 operations a day) the LCD informs the homeowner that a SERVICE is due and, yes you guessed it, it provides your details, ensuring repeat business for your company. Should you go to a site where the original installer is no longer available, merely plug in your Digital Business Card and load your details.

WHAT WILL THE LCD DISPLAY?

PROGRAM MODE - PRESS TEST BUTTON
Warns you if the battery is flat, mains have failed or beams are blocked. These three issues can catch you off guard when programming the motor.

PROGRAMMING GATE - CLOSED POSITION
To let you know that your motor direction in correct.

PROGRAMMING GATE - OPEN POSITION
To let you know that your motor direction in correct.

MARKER OK
Confirms that the Marker is reading every time the magnet passes the motor and, most importantly, that the installation is set up correctly.

PROGRAMMING COMPLETE - REMOVE LINK
Reminds you to remove the link. The link cannot be left on by mistake.

GATE CLOSED
When the gate is closed the LCD will flash the INSTALLER'S CONTACT DETAILS.

GATE OPEN
When the gate is open the LCD confirms that is has reached the open position.

AUTOCLOSE ACTIVE
A reminder if the Auto Close function has been selected and active.

BEAMS BLOCKED
A valuable guide. Either when programming or during normal operation, the LCD will tell you if the beams are blocked after a trigger has been received.

OBSTRUCTION - CHECK WHEELS; RAIL; FUSES AND FORCE SETTING
If the gate collides with an object or blows a fuse the LCD will display this message.

NO REV PULSES - CALL TECH SUPPORT
If the Rev Counter should miss pulses for any reason the LCD will display the INSTALLER'S CONTACT DETAILS.

LOW BATTERY - CALL TECH SUPPORT
The LCD will display the INSTALLER'S CONTACT DETAILS.

MAINS FAIL
If the main power supply to the motor fails for any reason the LCD will flash to get the homeowners attention.

PARTY MODE
Takes all the guess work out of knowing when PARTY MODE has been activated.

SERVICE DUE - CALL TECH SUPPORT
This is a fantastic way to remind the homeowner to call the installer when a service is due on their motor. The LCD's backlight will flash and display the INSTALLER'S CONTACT DETAILS.
